

Hosted Desktop

Hosted Desktop UK Limited ("HDUK") specialises in providing hosted desktop solutions to all sized businesses across the UK. Hosted desktops remove the need for a traditional, in-house IT infrastructure and enable more flexible working.

What is Hosted Desktop?

For the end-user the experience of using a hosted desktop is identical to that of a desktop PC - it looks, feels and behaves exactly the same. The only difference is that your applications, data and user profile are stored in our secure UK data centre and delivered to you via the Internet.

Your hosted desktop appears as if it was running locally on your machine and is delivered to you in exactly the same way regardless of where you are working, whether this is in the office on a PC, Mac or Linux, at home on a laptop or tablet or on the move with a smartphone

Key Benefits

Work from anywhere – access your IT data and applications from anywhere at any time with an Internet enabled device and Internet connection.

IT integration – combine the IT infrastructure of multiple offices and enable staff to work remotely.

Reduce IT costs – no need for expensive IT hardware, reduced licence and external IT support costs.

Security and reliability – all data is stored in secure data centres (in Berkshire and Kent) and we use the same industry-standard SSL encryption as that used for online banking and secure payments.

Your transfer to our hosted infrastructure can be completed with seven working days and can be achieved without any downtime or disruption to your normal working practice.

Once the transfer is complete we will effectively become your outsourced IT department and you will no longer have to worry about software updates, replacing outdated hardware and dealing with day-to-day IT issues.
